Accessory③

Accessory④

Accessory⑤

- ① Long white tube: It can protect the endoscope when inspecting the bottom of the slit, the depth of the pipe, and the scene where the endoscope needs to be placed in other objects.
- ② Black speculum: It can be used to inspect holes with a diameter smaller than the endoscope diameter (12mm). Black material will increase the image gain, can block external stray light and make the picture brighter.
- ③ Side-view mirror: It can be used to observe the back or side of an object, such as the inner wall of a pipe.
- ④ Short transparent tube: It can be used to fix the object distance when observing large-area flat objects, such as: observing circuit boards, coins, reading magnification, etc.
- ⑤ Transparent speculum: It can be used to inspect holes with a diameter smaller than the endoscope diameter (12mm).
- *Endoscope and accessories are not waterproof, please do not use in water and high temperature environment.

Endoscope assembly instructions

Install adjustable arm into column

Press NTL/PAL on remote control to switch lenses
