This ④, ⑤ and ⑥, ⑦, ⑧ are standard or optional, depending on the host you purchased. If the host you purchased supports the feature of the module and do not provide it as standard, then you can buy it separately as an optional one.

Users can also choose the carrying case to store the oscilloscope main unit and wiring and some modules, as shown below:

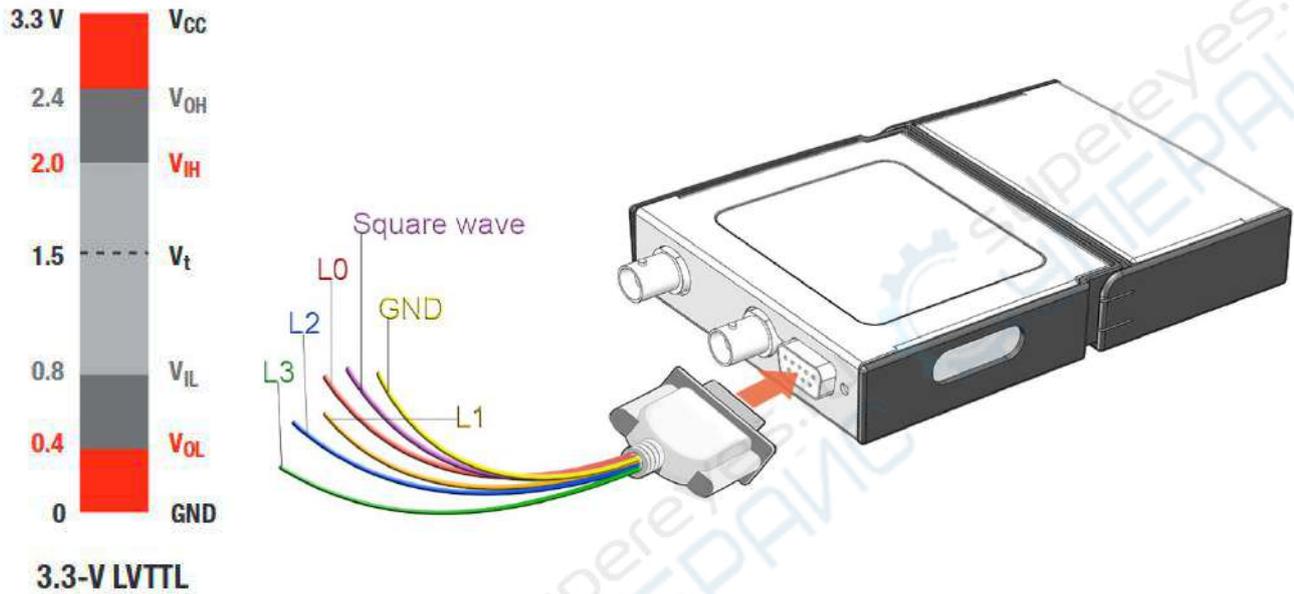

Or choose a box suitable for the user to display the scene, as shown below:

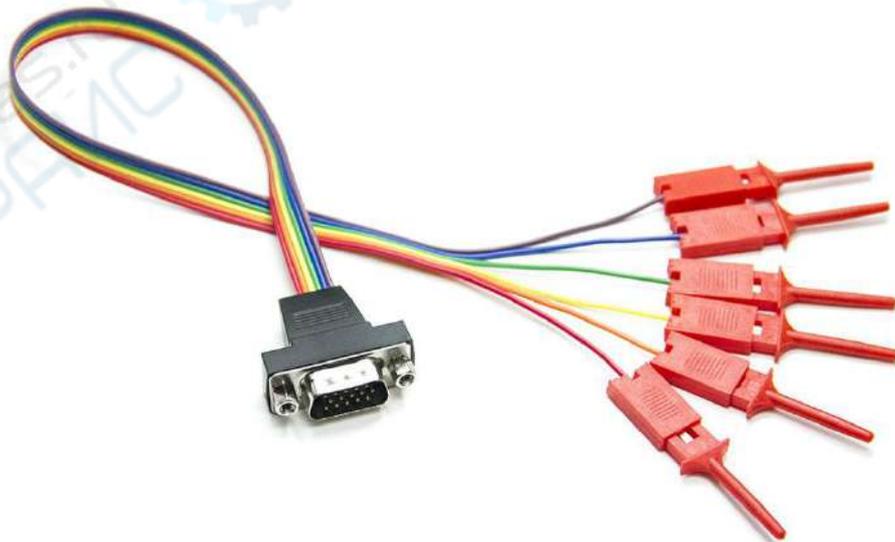

Logic Analyzer Module L02:

If the module is purchased later, the host needs to be added back to the factory.

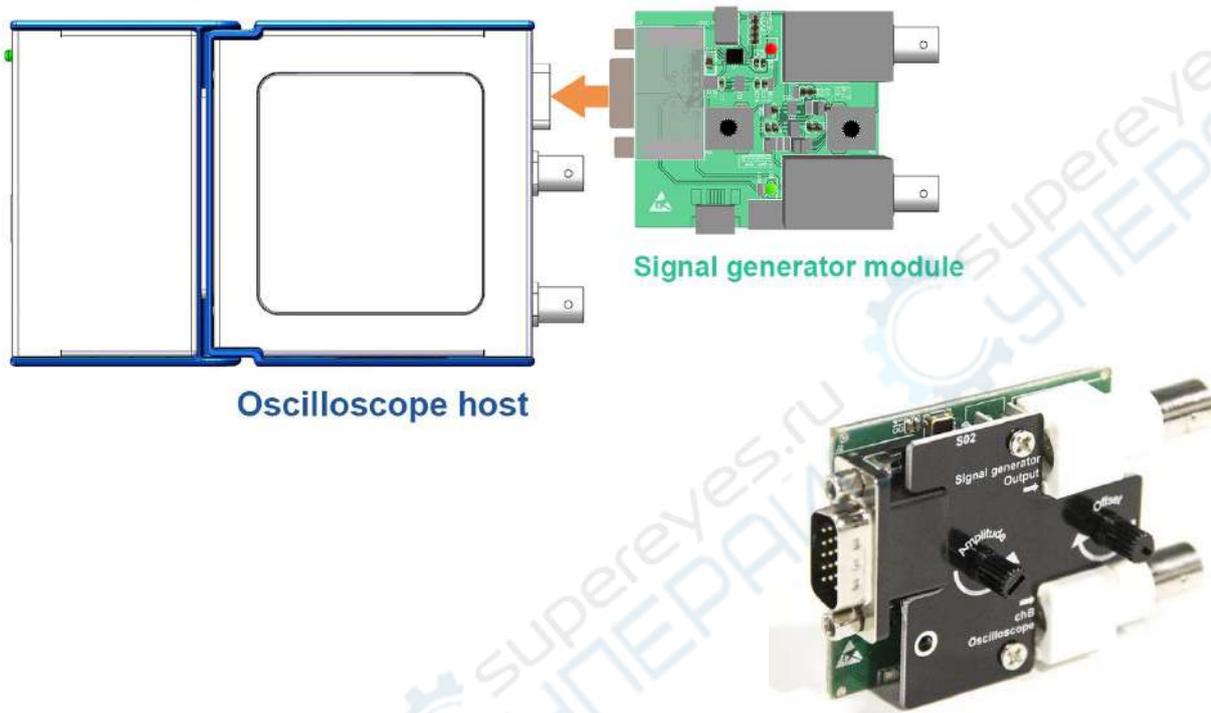

The input voltage between 2V and 3.3V is considered to be high and the input voltage between 0.8V and 0V is considered to be low for the four channels input L0~L3 of the logic analyzer shown above.

Signal Generator Module S02:

This module can be purchased later and added by itself.

Signal generator module S02 specifications:

Custom probe:

Pure software features, no additional purchase required. The most typical applications are current clamps. The software interface provides two sets of data calibration functions for custom probes. It allows users to purchase other physical probes of any BNC interface, such as current clamps. After the software is set, it displays the curves and data of the corresponding physical quantities.

App for Android phone(OSC482M/OSC482F):

Note:

Although most Android phones/tablets are supported, it cannot be ruled out that individual models cannot be turned on due to the inability to enable OTG. We will maintain a list of tested phones and ask the supplier for the list before purchase.
